Maple Compiler, Maple Engine, Maple FrontEnd

yehandong 1天前 成员

- MapleCompiler contains the new optimizations, new framework of loop, and etc. It's an improvement we've accomplished in the last 7 months.
- MapleEngine is at its beginning. It's not fully functional, but it can support basic program in MapleIR format.
- 3. MapleFE is also at its early stage, not functional yet, but can automatically parse basic syntax.

Please see the description in each project for more details.
